BACKEND DEVELOPER

About

- Web Back-End Developer: PHP | Laravel | MySQL | WordPress | Node JS | React | AngularJS
- Strong foundation in Back-End Web development with experience in learning and debugging for classmates.
- Short-term goal: Further strengthening available skills and learning new skills like Java, SpringBoot, Docker, and Azure.
- Long-term goal: Aspiring to become a leader of a development group before the age of 28.

Experience

Internship at Apps Cyclone (Back-End Developer – Laravel)

03/2024 – current

- Summary: During my internship at Apps Cyclone, I underwent comprehensive training in utilizing all functionalities of Laravel, a prominent PHP framework for web application development. Working under the guidance of an experienced mentor was an invaluable experience, allowing me to gain practical insights and deepen my understanding of Laravel's capabilities. Through this mentorship, I acquired a diverse skill set and honed my abilities in developing robust back-end solutions.

Personal Project: Ecommerce website using Node JS

12/2023 – 01/2024

- Description: Developed an e-commerce website using Node.js, JavaScript, and Ajax, with JSON files as database.
 - Implemented MVC architecture for efficient structure and maintenance.
 - Enhanced user experience through Ajax for dynamic content updates without page reloads.
